Case No. 3:20-cv-06754-WHA  
Related to Case No. 3:21-cv-07559-WHA

**OPENING EXPERT REPORT OF  
DOUGLAS C. SCHMIDT**

**HIGHLY CONFIDENTIAL - SOURCE CODE - ATTORNEYS' EYES ONLY**

1 Dep. Tr., 122:2-124:4.

2 **4. Receiver Playing Back Retrieved Media**

3 162. After receiving the setPlaylist message, the Receiver functions to retrieve and  
 4 playback a media item (e.g., the media item corresponding to the videoId in the setPlaylist  
 5 message). *See, e.g.,* Mo Dep. Tr., 142:6-22; GOOG-SONOSWDTX-00037243 [MDX  
 6 Communication Protocol v3], 51-52 (“Server to Screen” setPlaylist message containing “videoId”  
 7 for “[*video that should start playback ASAP.*”), 58-59 (“Remote to Server” “setPlaylist” message  
 8 containing “videoId” for “[*video that should start playback ASAP.*”); GOOG-SONOSWDTX-  
 9 00041491 [YouTube Orbit (MDx) Android - MDx Playback on Android], 95:

10 Eventually CloudSession.doLaunchApp (MdxPlaybackDescriptor initialPlayback)  
 11 gets called with the MdxPlaybackDescriptor. This will set the information of  
 12 MdxPlaybackDescriptor into ‘setPlaylist’ params outlined here and send this with  
 13 the connection properties when connecting. In response, the server will initialize the  
 14 RQ playlist with the given playback information and *tell the TV to start playing the*  
 15 *video.*

16 163. In this regard, the Receiver uses a given videoId (e.g., from the setPlaylist message)  
 17 to retrieve a corresponding media item from the given YouTube service. In particular, the Receiver  
 18 makes a “getPlayer” call with the videoId to the “Player Service” in the YouTube cloud  
 19 infrastructure and receives a response containing one or more URLs for the media item. *See, e.g.,*  
 20 Mo. Dep. Tr., 137:17-25, 138:13-23 (“At a higher level, the receiver, when it has a video ID, what  
 21 happens ... for playback typically contains a get player requests [sic]. That’s a network request.  
 22 And then that response contains information that is needed.”), 139:13-140:1 (Q: “Is the get player  
 23 request targeted to a service that is external of the receiver device?” A: “It hits the player service,  
 24 which is a back end.”), 141:8-15, 142:6-144:15 (“From my perspective, ... I guess the receiver or  
 25 client gets a video ID and ... what happens after that is a get player request is made and then the  
 26 response ... it may contain, you know, URLs related to where the content may be.”), 146:1-7;  
 27 Nicholson Dep. Tr., 93:23-94:11, 113:15-115:17, 124:24-125:11; *see also, e.g.,* GOOG-  
 28 SONOSWDTX-00039491 [YouTube Orbit (MDx) - Credential Transfer Tokens (CTTs)], 91  
 (illustrating Receiver making “GetPlayer” request with videoId to “Player Service”); GOOG-  
 SONOSWDTX-00039785 [Server], 85-86 (describing and illustrating process by which “RPC to  
 GetPlayer for available streams URLs” is made), 89; GOOG-SONOSWDTX-00052121 [YouTube

**HIGHLY CONFIDENTIAL - SOURCE CODE - ATTORNEYS' EYES ONLY**

Developer's Handbook – Life of a video watch], 23-26; GOOG-SONOSNDCA-00115814 [Edge Streaming and Bandid CDN], 15, 20.

164. The Receiver then uses the one or more URLs to retrieve the media item from one or more “Bandid” servers in the YouTube cloud infrastructure for the given YouTube service and then render the retrieved media item at the point within the media where the Sender was rendering when it detected the selection of the Cast button/icon and the selection of the Receiver from the Device Picker menu. *See, e.g.,* Mo Dep. Tr., 142:6-144:15 (“YouTube playback relies on what we call band-aid servers.... [T]hey are kind of like a cache system for storing ... video bits for playback. As far as I understand, player responds and obtains information that the player needs to know ... where these servers or caches are to load from.”), 144:19-145:6, 145:12-25; Nicholson Dep. Tr., 65:16-67:11, 113:15-115:17, 124:24-125:11; *see also, e.g.,* GOOG-SONOSWDTX-00052121 [YouTube Developer's Handbook – Life of a video watch], 23-26; GOOG-SONOSWDTX-00039785 [Server], 85-86 (describing and illustrating process by which “RPC to bandid for audio or video content” is made).

165. Notably, the aforementioned process by which a Receiver plays back media content occurs whenever the Receiver is to playback a media item, such as after finishing playback of the initial media item for the Cast session, after a user skips forward to a next media item, etc. *See, e.g.,* Mo Dep. Tr., 169:6-19, 175:1-23. For instance, after playing back the initial media item, the Receiver performs the aforementioned process using a videoId for the next media item contained in a received WatchNextResponse from the WatchNext service in the YouTube cloud infrastructure.

166. The process by which a Receiver plays back a media item corresponding to a videoId

**HIGHLY CONFIDENTIAL - SOURCE CODE - ATTORNEYS' EYES ONLY**

1 is shown below in a demonstrative that builds on Google's MDx architecture diagram:

2  
3 GOOG-SONOSWDTX-00037264 [Orbit & Cassini Deep Dive], 69 (modifications added); *see*  
4 *also, e.g.*, GOOG-SONOSWDTX-00050334 [Playback params passing in Audio Tier], 40-41 ("10.  
5 Client app [on Receiver] calls InnerTube getPlayer with the video ID and playlist ID.... 19.  
6 GetPlayer returns the streamingUrl ... to the client.... 20. YTM app [on Receiver] calls  
7 GetWatchNext with video ID and playlist ID.... 25. GetWatchNext returns the next track in the  
8 response.").

9 **5. YouTube Sender in Casting Mode of Operation**

10 167. After detecting the selection of the Cast button/icon and the selection of a particular  
11 Receiver (or set of Receivers) from the Device Picker menu, the Sender functions to detect an  
12 indication that playback responsibility has successfully transferred from itself to the selected  
13 Receiver (or Receivers), after which the Sender switches to operate in the Casting mode. *See, e.g.*,  
14 GOOG-SONOSWDTX-00041491 [YouTube Orbit (MDx) Android - MDx Playback on Android],  
15 95 (describing YouTube Sender transitioning its "Player stack" from a "local" mode to an "MDx  
16 or 'remote' mode" after detecting "MdxSessionStatusEvent").

17 168. The Sender detecting this indication and transitioning from the non-Casting mode  
18 to the Casting mode in which the Receiver (instead of the Sender) is configured for playback of the  
19 Watch Next queue is evident from changes to the user-facing appearance and functionality of the  
20 Sender. For instance, the appearance of the Cast icon displayed by the Sender is changed to indicate  
21 that the Sender is now connected to a Receiver, thereby informing the user that a Receiver is now  
22 responsible for playback as opposed to the Sender. *See, e.g.*, SONOS-SVG2-00060294 [Play media  
23 from Chromecast-enabled apps to your speaker or display], 94 ("When you're connected, the Cast  
24 button will turn from light to dark grey, letting you know that you're connected."); GOOG-  
25 SONOSNDCA-00061126 [Cast audio from Chromecast-enabled apps to speakers] ("The Cast  
26 button will change colors, letting you know you're connected."); SONOS-SVG2-00060340 [Watch  
27 YouTube Kids videos on your TV] ("Once connected, you can start watching [on your Chromecast,  
28 game console, or smart TV] when the Cast icon turns blue"); GOOG-SONOSWDTX-00038270,
